Analysis order for the detection of changes by genetic engineering

Status 01.04.2003

Contractor = Invoice recipient
Customer no.: | | | | | | |

Copy of the analysis report for:

Name / First name

Street

Postcode / Town

Sequential no.: _____ (sender)	sample type: _____ (Maize grain, maize flour, maize semolina, rape, soy, shredded soy etc.)
Date: _____ (sampling)	Sampler: _____

The stated fees are excluding VAT. Changes reserved.

Screening method for the detection of changes by genetic engineering; 35s-promotor; detection of the 35s-promotor of the cauliflower mosaic virus; verification reaction: Fragment of the maize-specific invertase gene and the soy-specific lectin	124,00 €
Screening method for the detection of changes by genetic engineering; NOS terminator Screening detection of the NOS detector from A. tumefaciens, verification reaction: Fragment of the maize-specific invertase gene and the soy-specific lectin gene.	124,00 €
Screening method for the detection of changes by genetic engineering;35S-prom.and NOS term Screening detection of the 35S-promotor of the cauliflower mosaic virus and the NOS terminator from A. tumefaciens, verification reaction: Fragment of the maize-specific invertase gene and the soy-specific lectin gene.	150,00 €
Screening or specific detection of changes by genetic engineering with 3 primer pairs and controls	179,00 €
Screening or specific detection of changes by genetic engineering with 4 primer pairs and controls	250,00 €
Specific detection of MaximizerTM-Maize (Bt176)	124,00 €
Specific detection of Bt11-Maize	124,00 €
Specific detection of LibertyLinkTM-Maize (T25)	124,00 €
Specific detection of YieldGardTM-Maize (MON810)	124,00 €
Specific detection of RR-Soy (Roundup Ready™)	124,00 €
Quantification, if result is positive	155,00 €
Direct quantification: Maize or Soy	250,00 €
Further specific detection on request (i.e. rape, potatoes)	

Further analyses on request!

Date: _____ Signature: _____

Notes regarding sampling:
Professional sampling is required. Even the slightest carry-over during sampling can lead to false positive results. Use new sampling vessels, use disposable gloves, avoid carry-over, for example though dust formation or sampling devices, send approx. 200 g (for maize grains and soy beans approx. 1000 g), label samples.

We are available for your further questions and enquiries!
